

The new provider locator has arrived at eyemed.com

With more than 65,000 providers in our networks, we know it might be hard for our members to pick just one. Of course, location is important, but we realize it's not the only thing you consider when looking for a provider.

With this in mind, we've invested our time and energy building a new and improved provider locator for our members. We're calling it Smart Locator, but you might just call it "one cool tool."

You can now search not only by location, but also by additional provider features and services that matter. A few examples are:

- Evening and weekend hours
- Same day glasses available
- Retinal imaging
- Pediatric care

But we didn't stop there. We know that brands matter, so we've also added the ability to search for providers by some of the eyewear brands they carry.

You can find the new locator on eyemed.com and we'll be upgrading our secure member sites in the next couple of months.
